SWITCH-OVER DAY

Day-one checklist for your hub. From the Workshop App to KART.

STEPS

1. Before the day: sign in to KART and check you see **`Workshop`** for your hub. If not, tell the hub lead now.
2. From the switch time: do not open the Workshop App to record anything.
3. Open KART > **`Workshop`**. Check the fleet board against the karts. Tell your hub manager (hub lead) about anything wrong, with the kart number.
4. Open **`Servicing`**: pick up the carried-over services. Complete or cancel each.
5. Work the **`Service Queue`** for karts showing **`Requires service`** (was Turn Required).
6. Work the open repairs. Record the parts used on each repair.
7. Close any stopping ticket whose fault is already fixed.
8. Carry on open campaigns in **`Campaign work`**; record fitted parts on the task.
9. New fault: log an incident; if the kart must not be used, raise a stopping reliability ticket.
10. Re-enter any open Workshop App order in **`Stores`**.

REMEMBER

Your hub lead confirms the date and time at least 24 hours before. Record every part in KART from day one. Check the shelf before ordering until the stock moves. Typed Workshop App notes are not copied.

IF KART IS DOWN

Write it on paper; enter it in KART when it is back. Do not use the Workshop App.
